Inspector General's Statement

(a) The DD/S eliminate the FE Division stock account and establish a procedure whereby all Division obligations are charged directly against project accounts both in the Field and in Headquarters.

(b) The DD/S eliminate or minimize other financial accounting and budget procedures which prevent Field Stations and other Agency components from obtaining true cost figures on projects and inventoried property.

DD/P Comment

Concur in principle: Part (a) of the recommendation should be world-wide in application and not restricted to FE Division. Part (b) the new Type II Accounting has minimized procedures but alone cannot provide cost figures.

DD/S Comment

With respect to part (a) the advantages and disadvantages of continuance of the FE Division stock account will be explored in collaboration with DD/P personnel and a conclusion reached as to whether the use of this account should be continued for the FE area on its present basis or eliminated. Stock allotment accounts were designed primarily for the procurement of materiel purchased for stock and subsequent issue to specific using projects and activities. In such circumstances obligations for property acquired cannot be charged directly against the using project accounts as contemplated in the IG recommendation. Procurement (or stock) allotment accounts are utilized for substantially all procurement at headquarters. Under the Financial Management Improvement Program improved costing techniques will be developed and placed into effect to permit identification of costs to the related activities but this will not obviate the need for procurement allotments or other techniques for processing transactions involving the purchase of property in advance of its actual identification with using activities.

30b

TOP SECRET

Concerning part (b) the Agency's financial accounting and budget procedures are designed to furnish obligation and expenditure data as well as cost data to fulfill both legal and management requirements. Cost data are being accumulated but, apparently, are not being reported in the detail and at the level desired. One of the objectives of the Agency's Financial Management Improvement Program is the compilation and distribution of cost data in the detail and level desired by management. Experiments and discussions are now being conducted in order to arrive at a practical solution to this problem.
